As at the time this CV was deployed to the web, 5-Mar-20 Flutter Version v1.15.3 Dev Channel, Flutter Web was in beta and amidst the many bugs that were still to be caught, one stood out: "Native Browser Support for Scrolling". Thus, as a workaround, the CV was created as a single-page web app and this Letter was linked outside of the app.

My Coding Background

I began to take programming serious after I landed the **Google Africa Certification Scholarship (ALC 3.0)**, this was in May 29, 2017. As a result, I started learning Java for Android Development and although Java was exciting, I felt very limited to just an audience of android users.

I heard about Flutter late 2018, but my coding in this cross-platform framework did not begin until February, 2019. My friend, Tobehk, wrote a book (more like a guide) for Unilag Undergraduate Aspirants, so I took it upon myself to convert the book to an app in order to maximize profit; Now that was one of the best choices I have made yet and the beginning of my Professional journey in Flutter. The app is called "Tobehk Tutorials-Unilag Post UTME Preparatory Guide". Although only the android version of the app was released, I'm no longer limited to only android users; I can and will eventually make releases for both iOS and Web users.

My Principles

If you don't stand for anything, you'll fall for everything.

In everything I do, whether related to religion or not, I try to follow the Ten Commandments written in the bible. These commandments contain the ground rules for a straightforward life. I learned this from Late Dr. Munroe in his book "The Power of Vision".

Next, I commit myself totally to whatever I do reasons being that

–what is worth doing is worth doing well, and

–whatsoever your hands find to do, do it with all your strength because there is no work in the grave when you die.

Finally, all my other principles are coupled together: -read as often as possible,

-find new skills and implement them,

-don't do to others what you won't do to yourself,

-worry less, think more, laugh much more,

-apologize when at fault, be contented and say thank you.

Conclusion

I feel honored to do what I love.

By God's help, I am an embodiment of ideas and I'll be more than willing to share them as well as include you in my upcoming Flutter Projects.
